

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

made by him in the island of Kauai, Hawaiian Archipelago, enable Dr. Stejneger to give a very full account of the ornithology of a hitherto little-known and exceedingly interesting region. Besides the full synonymy and copious technical annotations, one genus and six species are described as new, as follows: (1) *Gallinula galeata sandvicensis*, (2) *Himantopus knudsoni*, (3) *Chasiempsis dolei*, (4) *Phæornis myiadestina*, (5) *Himatione parva*, and (6) *Oreomyza* (gen. nov.) *bairdi*.

In a later paper* he adds to the list *Psittirostra psittacea*, two specimens of which are described, and the question is raised as to whether there may not be two species of *Psittirostra* in the Sandwich Islands, in view of Temminck's description and figure differing from the specimens here described, etc. — J. A. A.

Stejneger on Birds of the Commander Islands.† — Additional material received at the National Museum since the publication of his 'Results of Ornithological Explorations in Kamtschatka and the Commander Islands' has led Dr. Stejneger to prepare the present 'Catalogue,' the 'conclusions' to be drawn from this further consideration of the subject being reserved for a subsequent paper. Considerable space is given to a discussion of the status of *Larus schistisagus* and its relationship to *L. affinis*, with the conclusion that the two species are unquestionably distinct. Under *Stercorarius parasiticus* the probable moulting of the 'nasal cuirass' in the *Stercorarii* is considered, the indication being that "the process of shedding is as regular in the *Stercorarii* as in the Puffins."

Under *Ægialitis mongola* several pages are devoted to showing that *Æ. pyrrhorthorax* is a synonym of *Æ. mongola*. There are also extended technical notes on *Actodromas couesi*, *Limosa limosa melanuroides*, *Numenius cyanopus*, *Falco rusticolus*, and *Butalis griseisticta*. In all 143 species are commented upon. — J. A. A.

Stejneger on Palæarctic Bullfinches. — In a paper‡ of seven pages Dr. Stejneger reviews the species of *Pyrrhula*, treating of the following: (1) *P. cassini* (the type specimen of which is affirmed to be a female instead of a male), later named *P. cineracea* by Cabanis; (2) *Pyrrhula pyrrhula*, or common European Bullfinch, which is divided into the two subspecies, *europæa* (Vieill.) and *kamtschatica* (Tacz.); (3) *P. griseiventris*; and (4) *P. kurilensis*. Their synonymy is given, and a considerable series of specimens of *P. griseiventris* is described and discussed, with the result of dismissing *P. rosacea* Seeböhm as a pure synonym of *P. griseiventris*, in agreement with Blakiston and Jouy. — J. A. A.
